

BRAVDEN ALS

Keeping it real...

Meeting the expected standards for ALS Training

- Realistic manikin with look, feel and features that challenge responder engagement
- Robust for frequent and extensive use
- Reliable for round-the-clock training

Realistic. Responsive. Ready for Any Scenario

Prepare your team for real-world emergencies with our NEW Brayden ALS training manikin. Designed to deliver life-like performance with responsive functions, instructors can now deliver authentic training experiences in every aspect of ALS training.

With hyper-realistic features and flexible scenario options, this manikin bridges the gap between classroom learning and clinical performance —so healthcare professionals can train like they treat.

True-to-Life Anatomy

Realistic airway, chest rise, carotid pulse point and accurate anatomical landmarks ensure realistic hands-on practice.

Basic Airway Manoeuvres

Head tilt, chin lift
and jaw thrust

Ventilation with BVM

Oropharyngeal and
nasopharyngeal airway insertion

Advanced Airway Management

Supports supraglottic airway insertion, endotracheal intubation and mechanical ventilation

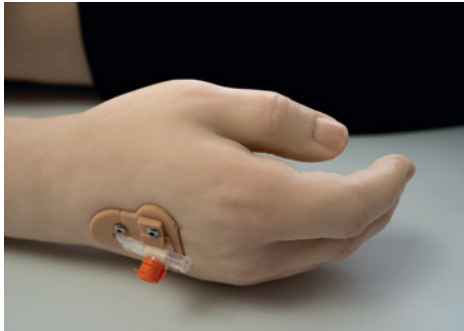

Supraglottic airway insertion

Endotracheal intubation

IV/IO Access

Practice venous and intraosseous cannulation for medication and fluid administration.

Articulated Limbs

Heightens realism of ALS scenarios

Quality CPR

Objective metric CPR feedback utilising Brayden LED lights (headlight only) demonstrating cerebral perfusion when high quality CPR is performed.

Team Training Ready

Ideal for practicing communication, role allocation, and decision-making under pressure.

Durable & Versatile

Built to withstand repeated use in classroom or field simulations.
